DEMONIC BINARY

SERVICE BRIEF

APIS / CLOUD / PRODUCTION

Backend & Cloud Engineering

Make the critical path reliable.

Develop APIs, cloud workflows and production services with enforceable controls.

01 CLIENT REQUEST > 02 API ENFORCEMENT > 03 CLOUD OPERATIONS

WHAT WE DO

- Backend and REST API development
- Cloud architecture and integrations
- CI/CD, provenance and rollback
- Identity and authorization design
- Observability and incident analysis
- Performance and resilience engineering

HOW WE WORK

- Trace requests and data ownership
- Define boundaries and fault handling
- Implement with negative-path tests
- Deploy, observe and hand off

YOUR DELIVERABLES

- Implemented services and integrations
- Identity and architecture diagrams
- Tests and instrumentation
- Deployment runbooks and recovery notes

THE OUTCOME

Stronger APIs and infrastructure that are easier to change, secure and operate.
